Field, Forces and Flows in Biological Systems

Alan Grodzinsky

Field, Forces and Flows in Biological Systems Alan Grodzinsky

Fields, Forces, and Flows in Biological Systems describes the fundamental driving forces for mass transport, electric current, and fluid flow as they apply to the biology and biophysics of molecules, cells, tissues, and organs. Basic mathematical and engineering tools are presented in the context of biology and physiology. The chapters are structured in a framework that moves across length scales from molecules to membranes to tissues. Examples throughout the text deal with applications involving specific biological tissues, cells, and macromolecules. In addition, a variety of applications focus on sensors, actuators, diagnostics, and microphysical measurement devices (e.g., bioMEMs/NEMs microfluidic devices) in which transport and electrokinetic interactions are critical. This textbook is written for advanced undergraduate and graduate students in biological and biomedical engineering and will be a valuable resource for interdisciplinary researchers including biophysicists, physical chemists, materials scientists, and chemical, electrical, and mechanical engineers seeking a common language on the subject.

From reader reviews:

Joaquin Hogan:

This Field, Forces and Flows in Biological Systems book is simply not ordinary book, you have after that it the world is in your hands. The benefit you receive by reading this book is definitely information inside this guide incredible fresh, you will get info which is getting deeper an individual read a lot of information you will get. This specific Field, Forces and Flows in Biological Systems without we understand teach the one who looking at it become critical in considering and analyzing. Don't end up being worry Field, Forces and Flows in Biological Systems can bring once you are and not make your carrier space or bookshelves' turn out to be full because you can have it inside your lovely laptop even telephone. This Field, Forces and Flows in Biological Systems having good arrangement in word in addition to layout, so you will not experience uninterested in reading.

Malcolm Khan:

This book untitled Field, Forces and Flows in Biological Systems to be one of several books this best seller in this year, honestly, that is because when you read this publication you can get a lot of benefit onto it. You will easily to buy that book in the book store or you can order it by way of online. The publisher of the book sells the e-book too. It makes you easier to read this book, as you can read this book in your Touch screen phone. So there is no reason to you personally to past this e-book from your list.

Shawn Jones:

People live in this new day time of lifestyle always aim to and must have the free time or they will get great deal of stress from both way of life and work. So , whenever we ask do people have free time, we will say absolutely indeed. People is human not just a robot. Then we question again, what kind of activity do you have when the spare time coming to a person of course your answer may unlimited right. Then ever try this one, reading publications. It can be your alternative within spending your spare time, the particular book you have read is actually Field, Forces and Flows in Biological Systems.

Carmen Hamm:

Are you kind of stressful person, only have 10 or maybe 15 minute in your day to upgrading your mind proficiency or thinking skill actually analytical thinking? Then you are receiving problem with the book than can satisfy your short period of time to read it because all this time you only find e-book that need more time to be study. Field, Forces and Flows in Biological Systems can be your answer because it can be read by you actually who have those short time problems.
