Light end materials, such as LNG or LPG, have poor safety reputation because of a few famous incidents such as Cleveland, Feyzin, Los Alfaques and Mexico City but when handled properly by well-trained personnel in correctly design installations, they present no more risk than other energy sources. This booklet raises the awareness of operators, engineers and technicians to the main hazards of light ends (methane to penthane). Using examples of actual accidents, enabling operators to spot and rectify potential hazards before incidents occur.

IChemE, the Institution of Chemical Engineers, is the center for chemical, biochemical and process engineering professionals worldwide.

We are the heart of the process community, promoting competence and a commitment to sustainable development, advancing the discipline for the benefit of society and supporting the professional development of members.

Some of the areas we publish in include:

- Safety in the process industries - the BP Process Safety series
- Consultancy for chemical engineers
- Project management in the process industries
- Contract management in the process industries - International Forms Of Contract series
- Communication skills for engineers
