University Science and Mathematics Education in Transition

Ole Skovsmose, Paola Valero, Ole Ravn Christensen

University Science and Mathematics Education in Transition Ole Skovsmose, Paola Valero, Ole Ravn Christensen

More than ever, our time is characterised by rapid changes in the organisation and the production of knowledge. This movement is deeply rooted in the evolution of the scientific endeavour, as well as in the transformation of the political, economic and cultural organisation of society. In other words, the production of scientific knowledge is changing both with regard to the internal development of science and technology, and with regard to the function and role science and technology fulfill in society. This general social context in which universities and knowledge production are placed has been given different names: the informational society, the knowledge society, the learning society, the post-industrial society, the risk society, or even the post-modern society. A common feature of different characterisations of this historic time is the fact that it is a period in construction. Parts of the world, not only of the First World but also chunks of the Developing World, are involved in these transformations. There is a movement from former social, political and cultural forms of organisation which impact knowledge production into new forms. These forms drive us into forms of organisation that are unknown and that, for their very same complexity, do not show a clear ending stage. Somehow the utopias that guided the ideas of development and progress in the past are not present anymore, and therefore the transitions in the knowledge society generate a new uncertain world. We find ourselves and our universities to be in a transitional period in time. In this context, it is difficult to avoid considering seriously the challenges that such a complex and uncertain social configuration poses to scientific knowledge, to universities and especially to education in mathematics and science. It is clear that the transformation of knowledge outside universities has implied a change in the routes that research in mathematics, science and technology has taken in the last decades. It is also clear that in different parts of the world these changes have happened at different points in time. While universities in the 'New World' (the American Continent, Africa, Asia and Oceania) have accommodated their operation to the challenges of the construction in the new world, in many European countries universities with a longer existence and tradition have moved more slowly into this time of transformation and have been responding at a less rapid pace to environmental challenges. The process of tuning universities, together with their forms of knowledge production and their provision of education in science and mathematics, with the demands of the informational society has been a complex process, as complex as the general transformation undergoing in society. Therefore an understanding of the current transitions in science and mathematics education has to consider different dimensions involved in such a change. Traditionally, educational studies in mathematics and science education have looked at changes in education from within the scientific disciplines and in the closed context of the classroom. Although educational change in the very end is implemented in everyday teaching and learning situations, other parallel dimensions influencing these situations cannot be forgotten. An understanding of the actual potentialities and limitations of educational transformations are highly dependent on the network of educational, cultural, administrative and ideological views and practices that permeate and constitute science and mathematics education in universities today. This book contributes to understanding some of the multiple aspects and dimensions of the transition of science and mathematics education in the current informational society. Such an understanding is necessary for finding possibilities to improve science and mathema

From reader reviews:

Latasha Hisle:

A lot of people always spent their free time to vacation or go to the outside with them household or their friend. Are you aware? Many a lot of people spent that they free time just watching TV, or perhaps playing video games all day long. If you would like try to find a new activity here is look different you can read some sort of book. It is really fun for yourself. If you enjoy the book that you just read you can spent all day long to reading a guide. The book University Science and Mathematics Education in Transition it is rather good to read. There are a lot of people that recommended this book. They were enjoying reading this book. When you did not have enough space to develop this book you can buy often the e-book. You can m0ore effortlessly to read this book from a smart phone. The price is not too costly but this book has high quality.

Sara Kelly:

People live in this new time of lifestyle always try to and must have the spare time or they will get lot of stress from both daily life and work. So , whenever we ask do people have spare time, we will say absolutely sure. People is human not only a robot. Then we question again, what kind of activity do you have when the spare time coming to you actually of course your answer will certainly unlimited right. Then do you ever try this one, reading books. It can be your alternative in spending your spare time, the book you have read is University Science and Mathematics Education in Transition.

Hilary Rangel:

As we know that book is vital thing to add our understanding for everything. By a reserve we can know everything we would like. A book is a group of written, printed, illustrated or perhaps blank sheet. Every year seemed to be exactly added. This guide University Science and Mathematics Education in Transition was filled about science. Spend your spare time to add your knowledge about your science competence. Some people has several feel when they reading the book. If you know how big benefit of a book, you can really feel enjoy to read a reserve. In the modern era like today, many ways to get book that you simply wanted.

Daniel White:

A number of people said that they feel bored stiff when they reading a reserve. They are directly felt the idea when they get a half areas of the book. You can choose the book University Science and Mathematics Education in Transition to make your personal reading is interesting. Your current skill of reading ability is developing when you similar to reading. Try to choose easy book to make you enjoy to see it and mingle the feeling about book and studying especially. It is to be first opinion for you to like to available a book and go through it. Beside that the book University Science and Mathematics Education in Transition can to be your brand new friend when you're feel alone and confuse with the information must you're doing of these time.
